

Snowbond® Lite Aluminium Composite Panel

The New Generation

Snowbond® Lite is a breakthrough in aluminium composite, comprising two aluminium cover layers and a PET core. It is lightweight and flexible, yet, extremely flat compared to solid aluminium – ideal for UV printing and directional signage.

Visually, Snowbond® Lite looks like solid aluminium, the layered composition however provides a much more rigid material. It has a White Digital print finish or a Silver Mirror and is available in 2440 x 1220 x 1.0 or 0.7mm thicknesses.

Key Features

- Weather Resistance
- Lightweight
- Smooth Surface
- Easy-Peel Film
- Cost Effective

Applications

- Indoor/Outdoor Signage
- UV and Screen Printing
- Display (POS/POP)
- Shop Fitting
- Exhibition Display
